

Customer Journey

The end-to-end operational lifecycle: transforming qualified real estate operators into exclusive, high-retention county partners through measurable acquisition outcomes.

Strategic Focus: Partnerships, Not Subscriptions

Gieni does not operate a self-serve SaaS portal. We become an exclusive, outsourced intelligence department for one operator per county. The customer journey is engineered to protect partner capacity, validate throughput in a paid 90-day sprint, and scale into multi-year recurring territory contracts.

1. Ideal Customer Profile (ICP)

Territory exclusivity is granted only to operators who possess the infrastructure to act rapidly on delivered opportunities:

- **Active Residential Wholesaler:** Closing 2–10+ distressed transactions per month with established title and escrow relationships.
- **Dedicated Acquisitions Team:** Trained acquisitions reps capable of initiating high-touch outreach within 24–48 hours of file delivery.
- **Distressed Property Investor / Fund:** Capable of structuring creative deal terms (probate advance, cash buyout, closing cost coverage) to solve seller hurdles.

Disqualified Buyer Profiles: Passive investors, retail realtors, casual house hunters, and solo operators lacking the capacity to contact sellers and make cash offers. Exclusivity is revoked if leads are not actively worked.

2. Awareness Stage: Problem Recognition

The prospect experiences acute operational pain from the commodity lead model:

- **Marketing Burn:** Spending \$4,000–\$10,000/mo on bulk direct mail and cold callers with response rates under 1%.
- **Rep Fatigue:** Acquisitions reps waste 90% of their day hitting attorney gatekeepers, estranged relatives, or dead-ends with no equity.

- **Competitive Pressure:** Frustration that generic probate lists are sold simultaneously to 30 other local wholesalers.
-

3. Sales Stage: Discovery & County Qualification

The sales cycle focuses on territory qualification rather than standard software demos:

- **Initial Strategy Session:** Review of current pipeline volume, target acquisition criteria, and local acquisitions capacity.
 - **County Availability Verification:** Audit of Gieni's Counties register to confirm territory exclusivity is unclaimed in target county.
 - **Buy-Box Discovery:** Capturing property types (SFR, 2–4 unit), target zip codes, price ceilings, and minimum spread expectations.
-

4. Proposal Stage: Audit & Founding Partner Terms

Gieni presents a tailored proposal grounded in local historical volume data:

Founding Partner Proposal Deliverables:

- **County Volume Audit:** 90-day baseline of qualified probate filings and real property match rates.
 - **Monthly Capacity Commitment:** Guaranteed delivery of completed files (e.g., 40 files/month for Founding Partner).
 - **Commercial Terms:** \$3,000/mo + \$2,000 one-time setup fee under a 90-day validation agreement.
 - **Strict Territorial Lock:** Full exclusivity covenant preventing competitor delivery in named county.
-

5. Onboarding Stage: Workflow Calibration (Days 1–15)

The 15-day setup sprint configures the local pipeline infrastructure before volume delivery:

- **Source Mapping:** Ingestion feeds connected to county court dockets, assessor rolls, and recorder deed books.
 - **Scoring Calibration:** Encoding partner-specific buy-box rules and Deal Friction Score (DFS) thresholds into OSE.
 - **Calibration Batch Review:** Delivery of 10–15 sample files to review evidence standards directly with the partner's acquisitions lead.
-

6. Delivery Stage: Production Cadence (Days 16–75)

Weekly batch delivery paired with event-driven priority triggers:

- **Scheduled Weekly Batches:** Delivered directly into partner CRM or secure portal every week (approx. 10 files/week).
- **Urgent Priority A Alerts:** Immediate notification upon court milestone events (e.g. Letters issued on a high-equity vacant home).
- **Weekly Disposition Reporting:** Partner updates contact outcomes, decision-maker accuracy, and offers made via shared tracker.

7. Outcome Stage: Conversion Milestones

Success is measured by downstream transaction milestones, not data volume delivered:

Key Outcome Progression:

1. Verified Decision-Maker Contact: Target 80%+ reach rate with controlling parties.
2. In-Person / Virtual Seller Appointments: Leading conversion signal of deal relevance.
3. Cash Acquisition Offers Submitted: Immediate validation of pricing alignment.
4. Executed Purchase Contracts: North Star metric defining partner ROI.

8. Renewal Stage: 90-Day Validation Review (Days 76–90)

At Day 90, Gieni and partner review the comprehensive scorecard to assess commercial performance:

- **Attributed ROI Audit:** Comparison of closed contract assignment/spread revenue against total Gieni fees paid.
- **Contract Transition:** Transitioning from 90-day validation into 6-month or 12-month recurring exclusivity at locked partner rates.
- **Capacity Tier Adjustment:** Upgrading to County Growth (50 files/mo) or County Pro (85 files/mo) based on county throughput.

9. Expansion Stage: Regional Territory Dominance

Once county unit economics are established, partners systematically scale across surrounding markets:

- **Adjacent County Add-On:** Activating contiguous counties at 50% discount on standard setup fee.
- **Metro-Exclusive Lock:** Securing multi-county regional exclusivity to establish total off-market probate monopoly.
